

The "Mill" Procedure

In order to avoid flying over the "Mill" property located near the south eastern cnr of the field, the below procedure **shall** be adopted by all members.

When taking off and landing towards the west larger aircraft will turn to the north and cross the end of the strip and loop around landing as per the below diagram. If you are flying smaller aircraft and can safely turn and land in the area near the trees then it is ok to do so.
